1.0 PURPOSE

1.1. To continuously monitor oxygen saturation of arterial blood.

1.2. To assess patient's response to oxygen therapy.

1.3. To evaluate the need for oxygen therapy.

2.0 DEFINITION/ABBREVIATION

2.1. **Pulse Oximetry**- is a non-invasive saturation monitoring where light sensor is taped to a limb or the ear. It is useful in determining the oxyhemoglobin saturation of patient at risk for hypoxia

3.0 RESPONSIBILITY

3.1 **Staff nurse** – observation and recording of patient's oxygen saturation whether with ongoing oxygen therapy or on room air.

4.0 POLICY

4.1. Calibration must be done by the Bio-medical technician.

4.2. Pulse oximeter probe must be cleaned with alcohol before and after each patient's use.

4.3. Attachment of the probe is done by qualified nursing personnel.

5.0 PROCEDURE (S)

5.1. Wash hand.

5.2. Assemble equipments.

5.3. Explain the procedure to the patient and/or to his family.

5.4. Select adequate site for application of the probe (lateral side of palm).

5.5. Use the proper equipment. Probe should be appropriate to patient's size and age.

5.6. Prepare the monitoring site by cleaning the selected area and allowing it to dry.

5.7. Apply the probe securely to the skin. Make sure that the light-emitting sensor and the light receiving sensor are aligned opposite each other.

5.8. Connect the probe to the pulse oximeter and check the operation of the equipment.

5.9. Always position the patient's hand at heart level.

5.10. Set alarm on the pulse oximeter.

5.11. Check oxygen saturation at regular intervals as ordered by physician. Monitor patient's haemoglobin.

5.12. Remove sensor on a regular basis and check for skin irritation or signs of pressure.

5.13. Document the procedure including the date, time, procedure type, oximetric measurement and any action taken. Record reading on appropriate form.

6.0 EQUIPMENTS

6.1. Pulse oximeter

7.0 ATTACHMENT/FORMS

7.1. ICU Daily Flow Sheet

7.2. Vital signs chart (GDOH-NUR-VSC-193)

7.3. Nurses Progress Notes (NUR-NPN-203)

8.0 REFERENCES

8.1. Nettina, S. (8th.).(2006). The Lippincott manual of Nursing Practice. USA

8.2. Weigand DL,6th ed (2010): AACN procedure manual for critical care, Philadelphia

9.0 REVISION CLAUSE

9.1. Used the new logo for AL-Baha Health Cluster.

9.2. Modify the policy and procedure lay out, changed the content of the Header and footer

RAMSAY SEDATION SCALE
1. Anxious, agitated or restless
2. Cooperative, oriented and tranquil
3. Sedated but responds to light glabellar tap or loud auditory stimulus
4. Asleep; brisk responses to light glabellar tap or loud auditory stimulus
5. Asleep, sluggish responses to light glabellar tap or loud auditory stimulus
6. Asleep: no response to painful stimuli

Eyes closed by swelling = C

Endo tracheal tube or Trache ostomy = T

Usually record the best arm response

Pupil size in mm

(+) reaction
(-) no reaction
(C) eye closed

Record right (R) and Left (L) separately if there is a difference between the two sides

Reassessment of Pain must be completed within 15min to 1hr post:

Oral Analgesics in 1 hr
IM Analgesics in 30 mins
SCut Analgesics in 20mins
IV Analgesics in 15 mins
SubL Analgesics in 15mins
PR analgesics in 15 mins
